

Utility Size Solar PV for Noorvik. Project Completed Dec 2016.

This project used the last of CIAP fund 7 that we have as left over from the Solar for Water-plant's "Synergy" project.

A fairly large array was built in Noorvik, to help offset the use of Diesel Fuel for the Power plant.

It will be operated by AVEC for the benefit of all of the community.

It is likely to generate 23 Mwh of electricity per year and estimated savings for the community of Noorvik is likely then to be 1,700 Gallons of fuel not needed per year.

At an average of \$ 4.00/gallon that is a savings of \$ 6,814.00/year
